

Aldanex™

Skin Protectant

The skin-friendly and cost-effective solution for the day-to-day care of incontinent patients

Aldanex® Gel has been specifically developed for the daily care of incontinent patients and groups of patients with similar problems - in particular babies and infants suffering from “nappy rash”.

Aldanex® Skin Protectant is a silicone protective ointment containing dimethicone, a transparent, viscous, non-greasy, smooth and fragrance-free silicone-based barrier ointment. **Aldanex®** is pH-neutral, zinc free and adheres extremely well to both dry and moist skin. The product’s superior adhesive qualities allow Aldanex® to maintain its protective barrier function against external influences for up to 12 hours.

Aldanex® protectant ointment contributes to skin hydration and helps maintain the integrity of the skin.

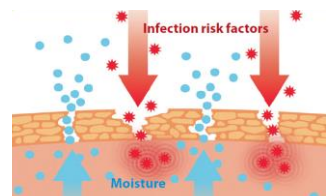

Incontinence and pressure ulcers: Incontinence is a frequent cause of skin damage. Both urine (pH 6 - 8.5) and faeces (pH 7- 7.5) contain toxic enzymes which impact on the skin and increase the normal skin pH (pH5.5). This compromises the role of the skin as a natural protectant against microbes, yeasts and fungi, resulting in irritated, red, inflamed and/or damaged and painful skin (Incontinence Associated Dermatitis, IAD). Moisture lesions are notorious risk factors for the development of pressure ulcers, which makes effective incontinence management a top priority in any care environment. Aldanex® has been designed to help achieve just that.

The 3-fold action of Aldanex® Skin Protectant:

- 1. Aldanex® prevents** the development of IAD, moisture lesions, pressure ulcers, intertrigo and diaper rash in vulnerable patients and babies.
- 2. Aldanex® promotes** skin repair by creating ideal conditions for natural healing.
- 3. Aldanex® protects** irritated and/or damaged skin by creating a barrier against harmful moisture related lesions.

Aldanex® Protects

Aggressive substances act on the skin and eat into the protective ‘acid mantle’. The thin, acidic protective film on the skin surface is broken and aggressive substances may enter and vital moisture may be lost.

Aldanex® creates a protective coating on the skin, which helps maintain and allow for the restoration of the barrier action of the acid mantle. The skin is protected against aggressive and harmful external influences (e.g., from urine, faeces or perspiration).

Indications

- For the treatment and prevention of skin damage caused by urine and/or faecal incontinence.
- Prevention of pressure ulcers up to category 2
- Nappy rash in babies and infants.
- Intertrigo
- Superficial lesions, maceration of peri-wound skin and maceration/friction around drains, tubes, catheters, tracheostomy and nasal cannula sites.
- In conjunction with antimycotics for fungal infections.

Case: Incontinence Associated Dermatitis

Infant, female, 9 months old. Pain complaints due to severe diaper dermatitis.

After 4 days

Status at start of treatment with Aldanex®.

After 3 days: rash has disappeared, redness reduced by 80 percent, no more pain.

After 4 days: rash completely healed.

Case: Ulcer with periwound maceration. Male, 77, Colostomy in later phase of treatment. Impaired renal function. Abdominal wall with granulating abdominal ulcer. Periwound maceration.

Status at start of treatment

13 days - complete wound closure

Aldanex[®]

Skin Protectant

Protects Skin, Prevents Skin Damage, Promotes Healing

Use just a **pea size** amount of Aldanex[®] for **more economy** and **optimum result**

Application

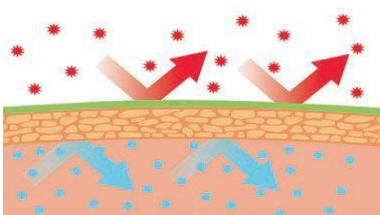

How to apply Biofact's silicone-based barrier cream Aldanex[®].

Tests have shown that the ideal dosage for a skin surface measuring approximately **60 square centimetres** (up to 8 x 8 centimetres) is a **pea-size 'droplet'** of Aldanex.

Apply a thin layer of Aldanex

- Thoroughly cleanse the entire skin area with a suitable cleanser.
- Wash or clean hands.
- Squeeze a small quantity (pea-size) of Aldanex from the tube onto a finger and apply this in the middle of the skin area you want to treat or protect.
- Gently and evenly distribute the Aldanex onto the skin. Do this in a circular motion from the centre outwards (avoid zig-zagging).
- Reapply after cleansing of skin following an event
- Ordering Codes: **85g Tube: 5274: 115g Tube 5273**
- **PCRS GMS Code: 86264 (85g tube only)**

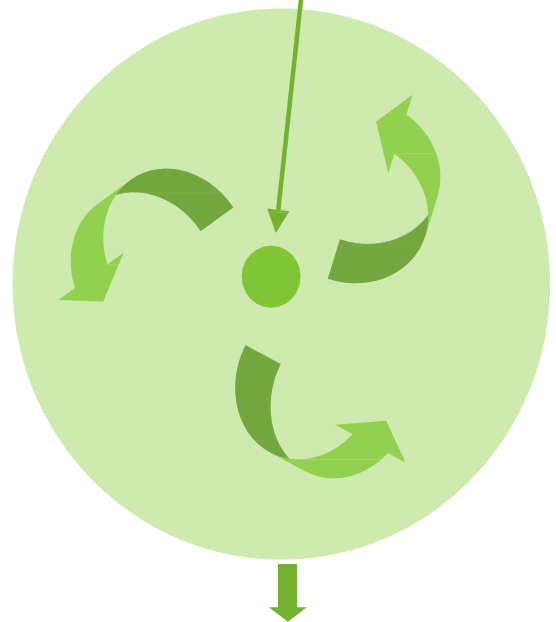

Aldanex Superior adhesion

This small quantity and Aldanex's strong adhesive qualities are sufficient to create an even barrier across the

entire skin area for up to 12 hours.

Use and store Aldanex at room temperature. Leave the tube standing upright, when not in use.

A pea-size 'droplet' of Aldanex is the ideal dosage for a skin surface measuring approximately **60 square centimetres**. (> 8 x 8 centimetres)
